

[Mnemosyne development under Windows](#) **[1]**

Best install 64 bit versions of everything.

- install cygwin, with packages make, git, gettext, gettext-devel
- install the latest Python 3.x under Windows
- Open a Windows cmd.exe with admin privileges and type:
pip install matplotlib nose cheroot webob sphinx pillow PyQt5
PyQtWebEngine googletrans gtts pyinstaller
- install InnoSetup <http://www.jrsoftware.org/isdl.php> [2]
- download mplayer: <http://mplayerwin.sourceforge.net/downloads.html> [3]
and copy it to
C:\Program Files (x86)\mplayer.exe so that the subsequent scripts pick it up.

To run a version for debugging purposes, type 'make'. To create an installer, type 'make windows-installer'.
